512 Emergency Response to Construction Site Incidents

Driving through your district today you will see multiple construction sites varying in size. These sites pose risks to first responders because of the hazards within and aren't typically visited unless there is an issue. In most cases an organization is not prepared for what lies beyond the construction entrance. Whether Industrial, Commercial or Residential, they are all unique but share the same risks. This course is designed to exploit the major risks faced by the first responder as well as educate on the basic tasks being completed. Topics include Trenching/Excavation, Fall Protection, Confined Space and many more areas which are performed at jobsites in department districts daily. These tasks may require a special response, and these are issues that need to be addressed before an incident occurs. At the end of this course, students will have the knowledge and confidence to return to their organization and readily prepare to plan and respond to incidents at a construction site.

This 1-day course will be offered Sunday.

Lead Instructor: Mike Wallingford Jr., Jeffersontown Fire and EMS
